## **DETAILED ACTION**

### ***Priority***

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-110, drawn to a two-dimensional optical scanner, classified in class 359, subclass 196.
- II. Claims 11-27, drawn to an image display system classified in class 345, subclass 7.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination (see claims 2-10) as claimed because the patentability of the combination does not rely on the details of the subcombination. The subcombination has separate utility such as an optical scanner for an image forming apparatus.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and the

fields of search are not coextensive, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
